# Homework 1: Image Negative Report

*Mustafa Hussain*

*Left:* Original image; *Right:* Inverted image.

The original image was encoded as 8-bit greyscale, so the values range from zero to 255. The inverse of the image was computed by subtracting the value of every pixel from 255.

The image is of a young robin who followed me around on a warm spring afternoon. They are so poufy! Cute little robin.
